

## How to Update 3D Experience Solidworks

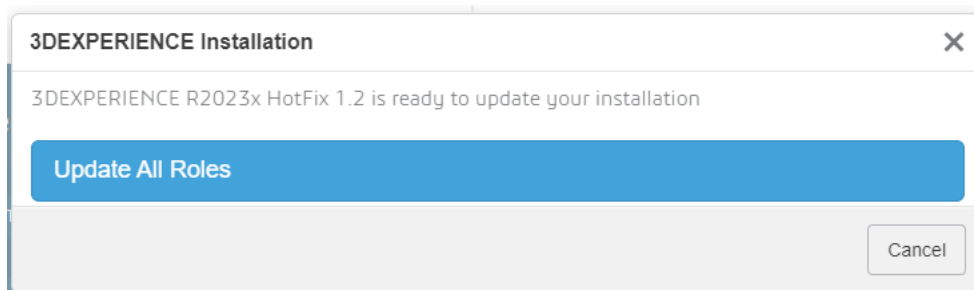

**NOTE:** If you are using Solidworks Connected anywhere you see Design with SOLIDWORKS you should be looking for SOLIDWORKS Connected

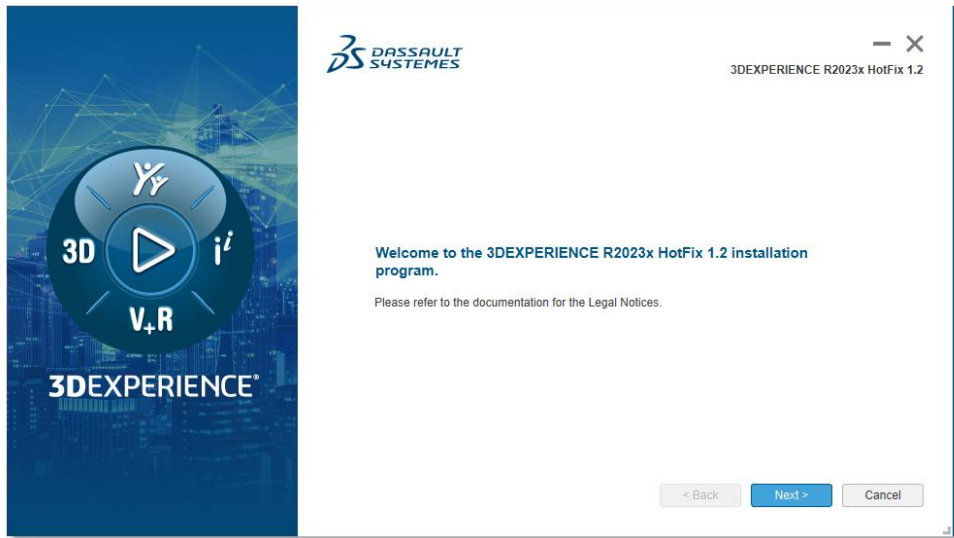

1. Login to your 3D Experience platform and go to the compass to launch Solidworks like you normally would but rather than clicking on the app icon click the arrow beside it. You will see the current hotfix version of Solidworks you are using and orange arrow wheel. Click on that wheel.

2. Now you will see a pop-up asking if you are ready to update your installation. Click update all roles.

3. After clicking update all roles and installation window should pop up.

4. Once the installation is complete you should launch Solidworks from your browser. You can replace the desktop shortcut for launching Solidworks by click the drop-down arrow beside the design with Solidworks app. Then click the icon that looks like a share arrow. This will create a new desktop shortcut.
